The Energy Director is a unique predictive energy management system designed by Powerit Solutions that allows you to manage ever increasing utility bills by regulating peak power demand and enabling participation in lucrative incentives via intelligent demand response. The Energy Director Family of controllers: Kompakt, Klassik and Intellekt, provide the plant operator with a tailored automated solution to match site needs.

We offer you the only Intelligent Energy Management system specifically designed for food and beverage processors. Our system can slash your energy expenses by regulating costly demand charges. Many of our industrial customers didn't know that these rates often make up 15% to 40% of their total electric bill and that these charges can be drastically reduced.

Our Energy Director technology has been installed in more than 600 facilities worldwide. Our North American food and beverage processing customers include leading processing plants such as: Del Mar Food Products Corp., Bonita Packing Co, Guadalupe Cooling, Paul Masson, Foster Farms, Dreisbach, JR Simplot, Patterson Vegetable Company, multiple Frito Lay sites, multiple Gallo Wine sites, multiple Constellation Wines sites, and multiple Versacold sites.
